Public Health Department, 21 Carr Road, NELSON.

31st July, 1956.

### To the Chairman and Members of the Health Committee.

Mr. Chairman, Ladies and Gentlemen,

I have great pleasure in presenting my Annual Report for 1955.

Apart from an epidemic of Measles and 7 cases of Acute Poliomyelitis the year was a relatively good one for the people of Nelson. The Infantile Mortality was 12.0 and the Maternal Mortality nil. These are very excellent figures for any authority.

It has been the custom in the past to emphasise the physical conditions of the population as distinct from the mental health. Nelson as an authority can take great comfort from the fact that its outlook on the welfare of the aged was well in advance of any. The establishment of its Hostel and its Welfare Scheme for the old folk have been models for other authorities to copy. So much mental distress is removed by these and by the regular contact of its old folk with the Welfare Visitors. Perhaps sometime in the near future a scheme for usefully employing some of the fit elderly people may be added to the very excellent scheme mentioned above.

I am indebted to various officials who have supplied me with information relative to work coming under their supervision which has assisted me in the preparation of this report.

I have the honour to be,

Ladies and Gentlemen,

Your obedient Servant,

R. E. ROBINSON.

Medical Officer of Health

STATISTICS AND SOCIAL CONDITIONS

OF THE AREA.

### STATISTICS AND SOCIAL CONDITIONS OF THE AREA.

Area in acres

Ordnance level, lowest point

Ordnance level, highest point

Ordnance level, centre of town

3,466

350 feet

1,100 feet

458 feet

Drainage of surface water - Natural, chiefly to Walverden Stream and Pendle Water.

Subsoil - Clay with understratum of sandstone and outcroppings of coal.

Population - Census, 1951 34,384

Registrar General's estimate of home population, mid-year, 1955 33,220

Number of inhabited houses -

Census, 1951 12,162

End of 1955, according to Rate Books 12,266

Number of Uninhabited houses -

Census, 1951 222

End of 1955 according to Rate Books 286

Rateable Value at 31st December, 1955 £253,440

General Rate, 1955/56 (s/d. in the £.) 23s. Od.

Sum represented by a penny rate £995.

The estimated cost of the Local Health Service for the financial year 1955/56 was £5,400, which is equivalent to a rate of 5.43d. in the £.

Registrar-General's estimate of the home population for mid-1955 is 170 less than the estimate for the previous year and 1,164 less than the Census figure for 1951.

### SOCIAL CONDITIONS.

The textile industry is the predominent industrial feature of the town, but the level of employment declined during the year due to the bad trade conditions experienced by the cotton and rayon manufacturers.

Many firms had to reduce their labour force and concentrate production. With two-thirds of the working population dependant on the weaving industry, a large proportion of workers experienced some measure of short-time working. Contraction in the industry resulted in substantial redundancies.

A serious aspect of the decline was the loss of male employees in the industry. Most of the redundant male operatives were absorbed in other industries, but due to the limited opportunities locally, many went into surrounding districts and further afield.

Fuller employment was maintained in other branches of the textile industry. In the manufacture of surgical dressings there was a substantial increase in the labour force of women employed. Other industries and services in the area were kept fully employed.

Despite short-time working and under-employment in the cotton industry few firms completely closed down. Further contraction, and with no immediate prospect of development of new industry in the area, may mean that workers will continue to seek employment outside the town, with the possibility of more migration of families from the area.

The fact that there was no large-scale wholly unemployed indicates to some extent the adaptability and mobility of workers, who changed to fresh employment where opportunities existed.

### CLIMATOLOGICAL CONDITIONS.

The Climatological Station situate in the grounds of the Cemetery, Walton Lane, is maintained by the Health Department, and observations are taken at 9.0 a.m. G.M.T. throughout the year. Monthly statements giving full details of these observations are forwarded to the Meteorological Office of the Air Ministry.

A marked feature of the weather during 1955, was the amount of bright sunshine recorded. This was the highest figure since records commenced in 1927. The rainfall was the lowest since 1933.

The first three months were very cold, particularly after the first week in February when the temperatures dropped to well below average. From the 17th - 19th the maximum temperatures were below freezing and the minimum temperature on the 22nd was as low as  $11.0^{\circ}$ F., which was the lowest such temperature since 4th December, 1950. It was the coldest February since 1947 and March showed no improvement, the mean maximum and minimum temperatures being the lowest since 1951 and 1931 respectively.

In spite of the very cold conditions the amount of bright sunshine recorded each of these three months was above average. In fact February was the sunniest since records were commenced in 1927, and March was the sunniest since 1929. The rainfall during this period was below average each month.

April promised better with mean and maximum temperatures above average, although there were very cold nights from the 14th - 21st, the dry conditions with bright sunshine continued. May brought a change to cold again with snow and sleet on 2 days, ground frost on 5 and air frost on 2 days, and 1.03" more rain than average, although the bright sunshine continued. June showed no great improvement, except in bright sunshine, which was an improvement on recent years.

The first four days of July were rather cool with a little rain, but from the 5th the maximum temperature daily was above average, by as much as  $10^{\circ}$  on eleven occasions. The mean maximum temperature for the month was  $6^{\circ}$  above average, making it the warmest July since 1934. There was no further rain and bright sunshine was recorded every day, the total for the month being 135.3 hours above average, making it the sunniest and driest July since our records commenced.

The total sunshine for the first seven months exceeded the total for the whole of the previous year.

This excellent weather continued through August and September, making August the warmest, driest and sunniest since 1947 and September the driest since 1949 and the sunniest since 1940.

October was another dry month with more than average sunshine, although the month as a whole was rather cooler than average. There were two cold spells, one from the 16th to 19th, another from the 27th to 31st. During the latter period the minimum temperature dropped to 24.9°F. and there was ground frost on 11 and air frost on 7 days.

The last two months of the year were a little warmer than average. Although ground frost and a little air frost were recorded, November was another dry month with a fair amount of sunshine. December was wetter than usual with snow on 3 days, but once again there was a good amount of sunshine although rather less than average for the month.

Over the year as a whole the rainfall was below average every month except May, June and December, and the monthly totals of bright sunshine were in excess of average for all but the three months June, November and December.

The warmest day of the year was 13th July when the maximum temperature in the shade reached 81.0°F., and the wettest day was 27th December, with 0.92" of rain.

The following statistical tables give information regarding:-

- 1. Barometric Pressure, Humidity and Rainfall.
- 2. Thermometer Readings and Mean Temperatures.
- 3. Bright Sunshine.

### BIRTHS.

The total of 414 live births registered during 1955 was an increase of 44 (41 males and 3 females) on the previous year, but it was 39 less than the average per year over the previous 5 years, and with the exception of 1954, it was the lowest number of live births registered since 1941.

This figure gives a Live Birth Rate of 12.5 per 1000 of estimated population, which is an increase of 1.4 per 1000 on the figure for 1954, but 0.8 per 1000 less than the mean rate for the previous 5 years.

The Adjusted Live Birth Rate of 13.6 per 1000 estimated population is an increase of 1.5 per 1000 on the figure for 1954, but 1.4 per 1000 less than the rate for England and Wales.

There were 2 more illegitimate live births registered than in the previous year and these gave Illegitimate Live Birth Rates of 0.42 per 1000 population and 33.0 per 1000 total live births, increases of 0.06 and 0.6 respectively.

Of the 414 live births assignable to Nelson, 89 or 21.5% occurred outside the area, and of the 376 live births registered in Nelson, 51 or 13.5% were assignable to other areas and 269 or 71.5% took place in the Maternity Home.

### STILL BIRTHS.

Only 6 Still Births were registered, which is a reduction of 5 on the previous year and the least number since 1950. The average number over the 5 years 1950-1954 was 10 and the average Still Birth Rate 21, whereas the Still Birth Rate for 1955 was 14 per 1000 total (live and still) births.

The Still Birth Rates for England and Wales were 23.1 per 1000 total (live & still) births and 0.35 per 1000 population, or 8.9 per 1000 and 0.17 per 1000 respectively greater than the corresponding Nelson rates.

### DEATHS.

There were 11 fewer deaths (6 males and 5 females) registered during 1955 than in the previous year, 494 against 505, and this was 34 less than the mean figure for the five previous years.

The Crude Death Rate was therefore 14.9 per 1000 estimated population, which was a decrease of 0.2 per 1000 on the previous year and 0.6 per 1000 on the mean of the five previous years.

Adjusting this figure by means of the comparability factor to allow for the composition of the population, we obtain an Adjusted Death Rate of 13.2 per 1000 of population which is 0.3 per 1000 less than the previous year, but 1.5 per 1000 greater than the death rate for England and Wales.

The principal causes of death were the same as in recent years, namely Coronary Disease, Other Heart Disease, Vascular Lesions of the Nervous System, and Cancer, which together accounted for 313 of the 494 deaths, or 63.3% of the total. The number of deaths from cancer was about average for recent years, but the Cancer Death Rate of 2.44 per 1000 population was 0.38 greater than the figure for England and Wales. Of the total deaths from cancer the percentage under 65 years of age was 43.0% compared with 31% last year, and 40% and 38% for 1953 and 1952 respectively.

In the age groups the largest number of deaths, 95 or 19.23% of the total deaths was in the 75-80 years group. Deaths of persons 70 years of age or over accounted for 56.6% of the total deaths, compared with 54.4% and 52.6% for 1954 and 1953 respectively.

The number of deaths exceeded the number of live births by 80 (39 males and 41 females) and the largest monthly total of deaths was in February.

Of the 406 deaths registered in Nelson 21.9% occurred in hospital or institution, but 58 or 14.28% of the total were outward transfers or persons belonging to other districts and 47 or 81.0% of these occurred in hospital. A total of 146 Nelson people died outside the town and 108 of these, or 73.9% died in hospital or institution. Of the nett deaths allocated to Nelson 30.3% died in hospital or institution, compared with 36.0% the previous year, and 31.5% in 1953.

### INFANT DEATHS.

Only 5 infant deaths were registered during the year which is 3 less than the previous year, only half the average number per year for the previous 5 years and the smallest number recorded.

All the deaths took place in hospital and three of them within. 21 days of birth. The causes of death were, prematurity 2, congenital malformation 1, pneumonia 1 and asphyxia 1.

The Infant Mortality Rate of 12.0 per 1000 live births was a decrease of 9.6 per 1000 on the previous year and is the lowest such rate recorded in the borough. The rate for England and Wales was 24.9 per 1000 related live births, which was the lowest ever recorded in this country, and was 0.5 per 1000 below that for 1954, the previous lowest.

In referring to previous statistics it is interesting to note some of the figures in connection with infant mortality over the past 50 years or so. In the first 5 years of the century the average number of infant deaths annually was 105 giving an Infant Mortality Rate of 13.5 per 1000 live births. By the early twenties the number of deaths had been halved and the mortality rate reduced to the 70-75 per 1000 mark. Twenty years later, in the 1940-42 period the average number of deaths annually was less than 20 and the Infant Mortality Rate from 40-50 per 1000 live births. The highest figures recorded during this period were 114 infant deaths giving an Infant Mortality Rate of 142 per 1000 live births in the year 1901. In a little over 50 years these figures have been reduced to 5 deaths annually with a rate 12.0 per 1000 live births.

### NEO-NATAL DEATHS.

Three of the five infant deaths were infants under the age of one month. This figure is only half that of the previous year and less than half the mean figure for the previous five years. Two of the deaths were due to Prematurity and one due to Congenital Malformations.

These deaths gave a Neo-natal Mortality Rate of 7.2 per 1000 live births compared with 17.3 per 1000 related births for England and Wales.

### MATERNAL DEATHS.

This was the second successive year in which no maternal death was registered.

The Maternal Death Rate for England and Wales was 0.64 per 1000 total (live and still) births, a reduction of 0.05 on the figure for the previous year.

The following Tables show: -

### GENERAL PROVISION OF

HEALTH SERVICES

FOR THE AREA

Particulars of the staff of the Health Department are given on page 5 of this report.

### HOSPITALS.

The Hospital Services for the Borough are provided by the Burnley and District Hospital Management Committee of the North-West Regional Hospital Board.

### VENEREAL DISEASES CLINICS.

This service is also provided by the Burnley and District Hospital Management Committee and separate clinics are held twice a week for both male and female patients at the Victoria Hospital, Burnley, as follows:-

Males	-	Tuesday Friday	p.m.		_
Females		Tuesday Friday	p.m.		_

### LABORATORY FACILITIES.

The services of the Central Pathological Laboratory, Salus Street, Burnley, are available for the use of this department and samples of milk, ice-cream and other materials were submitted for examination during the year, the results of which are given in the appropriate sections of this report.

In addition to the above, for the assistance of general medical practitioners of the town, specimens are received at this office for transmission to the Burnley Laboratory, and during the year the following specimens were submitted which were mainly from this source.

Blood - Wasserman test Faeces Sputum	<b>3</b> 9
Swabs - throat	10
others	7.0
Urine - bacteriological examination	4
pregnancy test	6
programoy top t	-
Total	41

# NATIONAL ASSISTANCE ACTS, 1948 AND 1951. SECTION 47.

No action was found to be necessary during the year under this section for the removal to suitable premises of persons in need of care and attention.

### TUBERCULOSIS SERVICE.

The Chest Clinic for the area is situate at the Marsden Hospital, Burnley, to which cases, and suspected cases, of tuberculosis are referred by medical practitioners. Patients are also visited in their own homes by the Tuberculosis Health Visitors of the Lancashire County Council Health Division No. 6. These Health Visitors advise on the care and after care of patients.

### OTHER SERVICES.

The Lancashire County Council provide and maintain the following services which are administered from the Divisional Health Office, "Oakleigh", Reedley, Nr. Burnley.

### Ambulance Service.

The Borough is serviced by ambulances and sitting-case cars from the Divisional Ambulance Station, "Oakleigh", Reedley.

Resuscitation apparatus, and other essential equipment, is carried in all ambulances.

Arrangements may be made for the conveyance by train of patients requiring to be moved long distances.

### Ante-natal and Post-natal Care.

The Ante-natal Clinic is held at 9/11 Carr Road, Nelson, and the sessions are conducted by a medical officer of midwife. Every endeavour is made to co-ordinate the work of the clinic with that of the patient's own doctor, or hospital clinic in the case of patients intending having their babies in hospital.

Post-natal examinations are arranged through the clinic. Dental care and treatment is also available for expectant and nursing mothers at Carr Road.

### Child Welfare Centre.

Situate at 9/11 Carr Road, Nelson, and sessions are held on Wednesdays at 2.0 p.m. and Fridays at 10.0 a.m. and 2.0 p.m. A medical officer and health visitors are in attendance and advice is obtainable on feeding, teething and general health matters affecting both mother and child. The object is to prevent ill health as distinct from curing established disease.

Proprietary brands of foods are available at reduced prices for both babies and nursing mothers, as also are National Dried Milk, Orange Juice, Cod Liver Oil and Vitamin Tablets.

### Day Nurseries.

A Day Nursery in Barkerhouse Road, Nelson, provides for children between the ages of nine months and five years. A standard charge is made, but reductions may be allowed according to financial circumstances.

### Health Visitors.

Health Visitors, who are fully trained nurses, are available for giving advice on the care of young children, expectant and nursing mothers, and care of the aged. Their duties include the visiting of the home to give advice on these and other health matters.

### Home Help Service.

This service is provided to give assistance to households in time of difficulty and the demands for help are now so numerous that priority has to be given to the most urgent needs.

An evening attendance service, and a night attendance service are now provided. The latter is intended to meet only the cases of extreme urgency, usually chronic sick cases at home awaiting admission to hospital.

### Home Nursing Service.

Fully trained district nurses are available to care for the sick in their own homes, and their attendance is normally authorised by the family doctor.

### Immunisation and Vaccination.

The immunisation of children against diphtheria and vaccination against smallpox is carried out free of charge at the Child Welfare Centre.

### Nursing Equipment.

A wide range of sickroom requisites and appliances including hospital-type beds, bedrests, bedpans, urinals, mattresses and commodes, etc., are available on loan to patients free of charge.

### Mental Health.

The duties of the County Council under Section 51 of the National Health Services Act, 1946, are delegated to the Divisional Health Committee and information and advice concerning the mentally sick and mentally defective persons can be obtained from the Divisional Health Office.

### Midwifery.

Midwives are available for home confinements and two district midwives of the divisional staff are assigned to Nelson. Both are resident within the Borough.

### School Health.

Ophthalmic, dental, minor ailments and orthopaedic clinics are provided and regular medical inspections are carried out in the schools.

There are two School Clinics within the Borough situated as follows:

9/11 Carr Road, Nelson. 259 Manchester Road, Nelson.

## Welfare Services. Care of the Aged.

Residental accommodation in hostels is provided for persons who by reason of age, infirmity or other circumstances, are in need of care and attention.

Further information regarding these services may be obtained from my report as Divisional Medical Officer.

SANITARY CIRCUMSTANCES OF THE A REA

### WATER SUPPLY.

Upland surface water and springs form the sources of water supply, the gathering grounds being situate in and above the Ogden and Blackmoss Valleys to the west, and Boulsworth Moor and Coldwell Valley to the east of the town. The whole of the supply is filtered and chlorinated before entering the mains to be conveyed to the town. The average consumption per day, for all purposes, is some  $2\frac{1}{4}$  million gallons, including that supplied to other authorities. A piped supply of water is provided from public mains to 12,532 houses within the Borough, having an estimated population of 33,200. There are 19 houses, with an estimated population of 48, obtaining water from private supplies. These houses are situate in the outlying districts.

The water supply during the year has been satisfactory in both quality and quantity, although warnings against the unnecessary use of water were given to the public following the exceptionally dry summer and autumn months.

A total of 102 samples of both raw water and the treated water going into supply were examined bacteriologically, and were reported upon as follows:

	No. of samples.	Positive.	Negative.
Raw water	51	31	20
Treated water	51	2	49

Further samples were taken following the receipt of the two positive reports on the treated water samples, and these and subsequent samples proved satisfactory. It was therefore concluded that accidental contamination had taken place in the first two tests.

Chemical analyses were also done on four occasions, all with satisfactory results.

One hundred yards of new water mains were laid during the year. Joint service pipe replacements have been carried out on 8 rows of property, embracing 64 houses, and it is estimated that a further 479 houses are without an adequate internal water supply, due to restrictions in the supply pipes serving these houses.

### DRAINAGE AND SEWERAGE.

The whole of the district is sewered, with the exception of the outlying premises to the east of the built-up area of the town. The extension of the existing sewers on the Marsdon Park Housing Estate continued, and 30 new houses were connected to the sewerage system.

The estimated daily dry weather flow was 1,750,000 gallons, and its treatment, carried out at the Linedred Works, is by screening, detritus tanks, sedimentation tanks, percolating filters and humus tanks. The final effluent is pumped up to the Leeds and Liverpool Canal, where it is discharged as compensation water. Storm water, after passing through tanks, is discharged into Pendle Water.

Sludge from the treatment process is available for agricultural and horticultural use.

### RIVERS AND STREAMS.

These are the responsibility of the Lancashire Rivers Board.

## SANITARY ACCOMMODATION.

Number of middens 25	5
Number of closets attached to these middens 33	
Number of pail closets 23	
Number of dry ashpits (excluding middens) nil	
Number of movable dustbins	2
Number of trough closets ini	
Number of waste water closets 6,372	
Number of fresh water closets 6,788	R
Conversions during 1955:	
Number of privy closets to fresh water closets nil	
Number of privy closets to pails 3	
Number of pail closets to fresh water closets nil	
Number of trough closets to fresh water closets nil	
Number of waste water closets to fresh water closets 239	
Number of premises at which mov able dustbins were	
substituted for fixed receptacles nil	

The above figures relate to sanitary accommodation at all premises, including factories, schools, etc.

There are 12,502 houses on the water carriage system.

## PUBLIC CLEANSING.

The Cleansing Department, under the control of Mr. V. Robinson, maintains a fleet of mechanical vehicles for refuse collection, gully emptying and street sweeping. Movable dustbins for household refuse are provided by the local authority. Trade premises provide their own refuse containers, but special receptacles are provided for food trade waste. A charge is made for the removal of such waste and the replacement and cleansing of the receptacles.

Domestic refuse is largely disposed of by controlled tipping at Swinden Holme, but about 20% of household refuse and combustible trade refuse is incinerated at the Charles Street Depot, where it provides a source of steam. Paper, scrap metal and other salvagable materials are retrieved.

The Cleansing Department also undertakes the emptying of pail closets and middens, this being done manually at intervals of two to four weeks.

#### SANITARY INSPECTIONS.

A total of 3,364 visits was made to 2,230 premises during the year. These figures are naturally lower than those shown for the previous year, since the Department was not fully staffed until 12th December.

The following tables shows the number of inspections and reinspections made for all purposes.

## SHOPS ACTS.

Duties under these Acts are carried out by Mr. F. Clegg, Shops and Markets Inspector.

## CAMPING SITES AND MOVABLE DWELLINGS.

There are no licensed sites within the Borough, and no application for such has been received.

## ATMOSPHERIC POLLUTION.

There are 46 factory chimneys in the district, and observations of these chimneys were made on 587 occasions. Each observation was of thirty minutes' duration.

Black smoke was seen to be emitted from 27 of these chimneys on 128 occasions, but in 81 instances this was of less than two minutes' duration. Nineteen chimneys, upon which 141 observations were made, were seen to emit no black smoke, although in some cases emissions of smoke of a moderate density were observed for long periods. Of the 81 emissions of black smoke of under two minutes' duration, 36 were of over one minute but less than two minutes, and 45 were of less than one minutes' duration.

The following table gives comparisons over the last five years of the emissions of black smoke in excess of two minutes.

								1955	1954	1953	1952	1951
		ervation minutes			3 9 9 9 9		0 0 0 0 0 0 0	587	583	589	509 1	343

smok	e em	of obseissions	of d	over 2	2 minu	ites	3 t	8%	6%	4.4%	6.6%	30.3%

The atmospheric pollution recording station continued to function during the year, and recordings were taken monthly. The overall deposition of total solids was lower than that recorded the previous year, and from figures published by the Department of Scientific and Industrial Research, it would seem that the extent of atmospheric pollution in Nelson is lower than that obtained from the results of analyses of deposits at some 110 "average" recording stations over a long period. It must be remembered that all these figures relate to the extent of atmospheric pollution in a relatively small sector of the town, namely that in which the deposit gauge is sited.

The analyses show that, since the inception of readings in March, 1952, the lowest and highest amounts of total solids were recorded during July and December respectively of this year.

The following table shows the amount of total solids deposited over the last 46 months, the figures representing tons per square mile per month.

	1952	1953	1954	1955	Average
January	-	11.56	13.28	7.56	10.80
February	-	10.35	11.33	5.57	9.08
March	10.74	11.43	7.36	6.83	9.09
April	9.97	9.44	7.32	13.12	9.96
May	9.64	8.82	10.71	13.12	10.57
June	12.99	10.01	8.63	10.37	10.50
July	9.17	13.85	16.11	3.44	10.64
August	12.74	10.04	11.23	9.42	10.86
September	16.56	11.30	15.45	11.23	13.64
October	9.48	7.29	16.67	14.79	12.06
November	6.79	11.24	13.88	7.26	9.79
December	20.68	10.39	17.88	23.36	18.08
		<del> </del>			
Annual Total	118.76	125.72	149.85	126.07	135 approx.

It will be observed that, whilst the average results show some seasonal rise and fall, particularly in the earlier months of the year, the individual results are sometimes at variance with the average. This is probably due to changes in atmospheric conditions, resulting in the smoke being carried to other parts of the district.

The years 1953 and 1955 showed deposits of solid matter in almost equal amounts, yet the deviation from the average figure over the four years is considerable during some months, only the month of June being constant in its rate of deposition. A comparison of the figures for these two years shows that the deviations are at variance with corresponding months in each year.

Deviation from average expressed to the nearest ton per square mile per month

	Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.
1953	+ 1	+ 1	+ 2	- 1	- 2	Αv.	<b>+</b> 3	- 1	- 2	<b>-</b> 5	+ 1	<b>-</b> 8
1955	- 3	3	- 2	<b>‡</b> 3	<b>+</b> 3	A⊽.	- 7	- 1	- 2	+ 3	- 3	<b>4</b> 5

Thus, although the total amounts of solids deposited on this area of the town was almost identical during the two years, no comparison can be drawn month by month. The establishment of another atmospheric pollution recording station in another part of the town would give a more accurate figure of the extent of pollution over a wider area.

Determination of the Sulphur Dioxide present in the air is also undertaken, by the lead peroxide method. In this method a small cylinder or "candle" coated with lead peroxide is exposed to the air for one month and then analysed for sulphates. The results are expressed in milligrams of sulphur trioxide per day per 100 square centimetres of standard lead peroxide exposed in the standard apparatus.

The following table shows the figures obtained since the scheme began:

	1952	1953	1954	1955	Average
January February	wa.	4.35 3.07	2.42	3.56	3.44 2.45
March	2.02	2.66	2.80	2.40	2.47
April	-	1.70	2.02	2.61	2.01 1.58
June July	1.31	0.87	1.87 1.61	1.71 0.65	1.44 1.12
August September	1.33 1.43	1.74 1.74	1.76 2.27	1.28	1.53 1.91
October	1.99	2.29	3.35 3.42	2.79 3.02	2.61
December	3.47	3.38	3.67	3.73	2.64 3.56
Average	1.83	2.17	2.39	2.37	

The range of the yearly results at more than 600 sites at which recordings were made for the Department of Scientific and Industrial Research was from 0.2 units at semi-rural sites to 10 units or more in heavily polluted areas. From these published figures it will be seen that the site in Walton Lane is not situate in a heavily polluted area.

The analyses in this case do show a seasonal rise and fall, due quite probably to domestic fires in the neighbourhood.

The figures are further split up in the tables below to show the average concentrations in the winter and summer periods.

## Winter Period.

52/53	53/54	54/55	Average
2.97	2.45	3.12	2.85

## Summer Period.

52	53	54	55	Average
1.34	1.42	1.84	1.76	1.53

## SWIMMING BATHS AND POOLS.

Two swimming baths, together with a number of slipper baths are provided at the Public Baths Department in Bradley Road. Open air swimming facilities are provided in Marsden Park. Water filtration and chlorination plants are in operation at both premises.

#### DISINFESTATION.

Disinfestation, due to various forms of insect life, was carried out by the Department at 4 council houses and 23 other houses during the year. Smoke generation and residual spray were the methods employed, with satisfactory results.

In addition to work actually carried out, advice and supplies of suitable insecticides were freely given on many occasions to householders calling at the Department.

## RODENT CONTROL.

This work is carried out under the direction of Mr. V. Robinson, Director of Cleansing, and the following table shows the action taken.

<i>'</i>				Infest	ations	
Premises inspected			Fou	nd	Treated	
			Rats	Mice	Rats	Mice
	v			,

Agricultural Premises	. 9		2	3	1	-
						<del></del>
Total	425		122	114	120	111

### SCHOOLS.

The standards of sanitary accommodation and hand washing facilities at the 25 schools vary considerably. Although work has been carried out at four schools during the year, there still remain 15 schools at which facilities for hand washing are considered unsatisfactory due to lack of constant supply of hot water.

The improvements carried out include the provision of automatic flushing systems to a block of urinals, the conversion of
six old type closets to modern individually flushed pedestal basins,
and the provision of closet accommodation and washing facilities
for teaching staff.

### OFFENSIVE TRADES.

There are no established offensive trades in the district.

#### FACTORIES ACT, 1937.

Total	15	12	-	. 8	-

3. Outwork: no notification has been received during the year

## COMMON LODGING HOUSES, HOUSES LET IN LODGINGS, AND UNDERGROUND SLEEPING ROOMS.

There are no such premises within the Borough.

### CANAL BOATS.

It has not been possible to intercept any canal boats plying on the Leeds and Liverpool Canal.

## RAG FLOCK AND OTHER FILLING MATERIALS ACT, 1951.

There are five registered premises on which rag flock or other filling materials are used in the manufacture of furniture, etc. Seven inspections of such premises were made during the year.

Two samples of filling materials were taken during the year, and submitted for the prescribed tests. A sample of rag flock was reported upon as being satisfactory, but a sample of cotton flock did not conform to the requirements of the Regulations. The vendor was advised, and the stock withdrawn from sale.

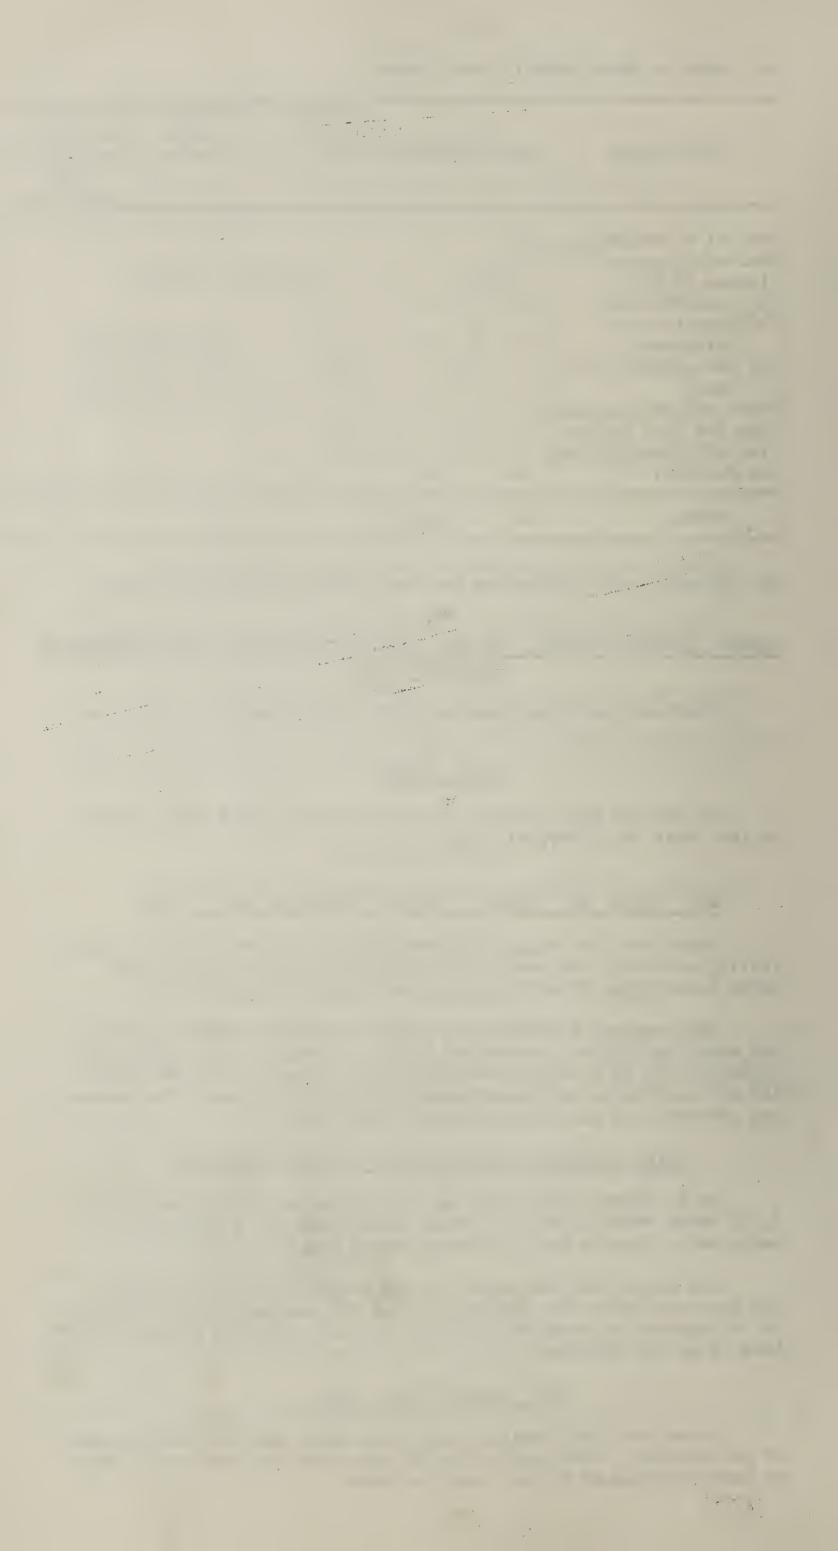

## CHIEF SANITARY REQUIREMENTS OF THE DISTRICT.

As in former years, this is the conversion of the remaining 6,372 waste water closets to fresh water closets. A total of 239 waste water closets were converted during the year.

One notes from the report of the Medical Officer of Health for the year 1895, that 282 privies and 270 cesspools were reported for alteration to water closets in that year, so it is apparent that this is no new problem.

### PET ANIMALS ACT, 1951.

There are five premises registered under this Act for the sale of pet animals. Nine inspections of these premises were made, when no contraventions of the Act were observed.

HOUSING

The general standard of housing remains reasonably satisfactory. The defects found were largely due to lack of regular maintenance, occasioned by uneconomic rentals. The prolonged spell of dry weather during the summer months enabled many property owners to complete outstanding external work. Many of the defects remedied during this year were the subject of notices served last year,

A total of 167 meetings between owners and contractors and the Sanitary Inspectors were held, when the policy of discussing the work required to be done proved sound.

A total of 237 houses were inspected for housing defects and 966 visits were made for that purpose. It is estimated that 69 houses are unfit for human habitation, and a further 105 were found to be not in all respects reasonably fit for human habitation but were capable of being rendered fit. Fifty six of these houses were rendered fit.

The following table gives details of work done on dwellinghouses during the year:

•

	19	9	19

The number of complaints received was 293, and upon investigation it was found that action could be taken in 246 instances. The nature of the complaints varied considerably, ranging from general housing defects to advice on the treatments for woodworm and slugs, from water in cellar to sub-tenant being refused access to the kitchen, from the tipping of soot to the identification of insects.

One very common source of complaint, apart from the usually accepted forms of dampness, is water in cellar. Some thirty complaints of this were received during the year.

Complaints of offensive odours were numerous. The most unusual, perhaps, was the case of a fishy odour in a workroom. This was traced to the use of plastic lamp shades over the electric lights. The dry summer brought a crop of complaints about offensive smells from street gullies and rarely used house gullies and water closets, all due to the water traps becoming unsealed. Decomposing rodents in inaccessible places and fractured gas mains and pipes accounted for further varieties of odour.

Complaints relating to insect infestations were mainly confined to cockroaches and golden spiders, but four infestations of fleas were discovered.

Some nineteen complaints were received regarding tipping of various types of refuse on open land. Chimney sweeps and building contractors, never identifiable, mar the district with indiscriminate tipping of soot and rubble.

#### SUPPLW HOUSES. SUFFICIENCY OF OF

There is no shortage of houses in the Borough. The demand for Corporation houses is largely from people wanting houses with modern conveniences, although this demand has decreased appreciably.

At the year end, a local authority scheme embracing 60 houses was in hand, and 19 houses had been completed, with work in progress on 17 houses.

## OVERCROWDING,

Three cases of overcrowding were discovered during the year, but only two were cases of statutory overcrowding.

INSPECTION AND SUPERVISION

0 F F 0 0 D.

## MILK SUPPLY.

For milk sampling purposes there were 77 different sources of milk within the Borough last year. This represents an increase of 10 over the previous year's numbers. Of this total 63 milks are sold retail in Nelson, 9 of them produced within the district. The remaining fourteen milks produced in Nelson are sold wholesale for subsequent pasteurisation in other areas.

		Sources of Milk Supply.				
Grade of Milk	Producer outside Nelson	Producer - retailer in Nelson	Producer- wholesaler for retail sale in Nelson	Producer- wholesaler for Pasteuris- ation	Total	
T.T. Milk	35	4	4	4	47	
Ungraded	6	1	-	10	17	
Pasteurised	4	-	tole	<b>ano</b>	4	
T.T. Past.	4	-	-	-	4	
Sterilised	5	-	-	-	5	
Total :	54		· · · <u>4</u> · · ·	14	77	

## Milk and Dairies Regulations, 1949.

No. of registered distributors operating from:

ł	(a)	Dairies in the district	9
1	(b)	Shops other than dairies	115
ł	(c)	Premises outside the district	27

Under the Milk (Special Designation) (Raw Milk) Regulations, 1949, 36 dealers' licences to use the special designation "Tuber-culin Tested" were issued. Under the corresponding Regulations governing heat-treated milks, licences were issued to 32 retail distributors of "Pasteurised" milk and 126 retail distributors of "Sterilised" milk.

The number of milk samples taken during the year was 253, of which 23 were heat treated milks. Samples of raw milk were submitted to biological tests and the Methylene Blue reduction test for keeping quality. The results are summarized below.

Grade of Milk	Biologic	Biological Tests Methylene Blue Tests No			No	
	Neg.	Pos.	Satis.	Unsatis.	result	Totals
Tuberculin Tested	78	-	77	8	6	169
Non-designated	24	2	21	13	1	61
Totals	102	2	98	21	7	230

Nine of the 21 milks giving unsatisfactory methylene blue results were retailed in the district; six of these were tuberculintested milks, the other three being non-designated milks. The remaining 12 unsatisfactory samples were of milk sold wholesale for pasteurisation. Three samples of tuberculin-tested milk and ten samples of non-designated milk produced in Nelson gave unsatisfactory methylene blue results.

Of the two non-designated milk samples yeilding positive biological results, one was produced in the district, and the milk wholesaled for pasteurisation. The other was produced outside the district, and sold retail in this area. Steps were immediately taken to ensure that the retail sale of this milk was stopped pending the results of investigations be the Divisional Inspector of the Ministry of Agriculture and Fisheries.

Twenty three samples of heat-treated milks were submitted to the appropriate tests, and were all returned as satisfactory. Ten were samples of T.T. Pasteurised milks, nine of Pasteurised milks, and four of Sterilised milks.

### FOOD INSPECTION.

The following foodstuffs, an increase of 9 cwt. over the previous year's total, were inspected and found to be unfit for human consumption. All were surrendered voluntarily for destruction.

Food.	No.	Tons.	Cwts.	Qrs.	Lbs.	Ozs.
Meat Fruit	1278 625		<b>15</b> .	1 2	25 7	$14\frac{3}{4}$
Vegetables	276		3	0	12	15
Milk Fish	80 79		6	3	6 26	13 10 <sup>3</sup> / <sub>4</sub>
Miscellaneous	160	April 1970, and began the combanded april	8	1	12	. 1. 1. 1.
Total	2498	2	2	2	7	8

Other examinations of foodstuffs were also carried out, and in some cases samples were forwarded to the Central Pathological Laboratory or the Public Analyst for detailed examinations of the foodstuffs.

These samples included one of milk chocolate, five of frozen egg, one of lemonade, one of bread, one of tinned cream, and six of milk bottles. In the case of a sample of butter, thought by the purchaser to be margarine, the matter was referred to the Lancashire County Council as Food and Drug's Authority. A Sampling Officer purchased a formal sample from the shopkeeper, and it was reported upon by the County Analyst as genuine.

#### MEAT INSPECTION.

There were three licensed slaughterhouses in operation during the year, although one curtailed activities towards the latter part of the year. Visits to slaughterhouses for meat inspection purposes totalled 646, many of them outside normal office hours. These visits were particularly so on Bank Holidays and at weekends. Approximately seven tons of disea. The meat was rejected from the 6,275 carcases inspected.

The following table shows the monthly figures of animals slaughtered.

Month	Cattle	Cows	Sheep	Pigs	Calves	Total
January February March April May June July August September October November December	80 66 64 54 64 51 40 60 31 33 28 22	24 17 10 14 16 12 16 21 11 24 18 24	491 345 326 263 338 371 325 636 307 385 342 272	125 103 116 108 125 72 45 57 39 57 72 103	4 3 1 - - 1 6 6 16 9 6	724 534 517 439 543 506 427 780 394 515 469 427
Total	593	207	4,401	1,022	52	6,275

All animals slaughtered are inspected ante-mortem and post-mortem as to their fitness for human consumption. The following table summarizes the findings of the post-mortem inspections.

	Cattle excl.	Cows	Colmon	Sheep	Dima	Horses
	Cows.	Cows	Calves	and Lambs	Pigs	norses
Number killed	593	207	51	4401	1020	-
Number inspected	593	207	52	4401	1022	_
ALL DISEASES EXCEPT TUBER- CULOSIS AND CYSTICERCI:

Cysticerci	53.9%	66.1%	1.9%	21.3%	12.3%	
TUBERCULOSIS ONLY:			1,			
Whole carcases condemned Carcases of which some part	3	2		1	7	-
or organ was condemned Percentage of the number	54	48	-	-	45	-
inspected affected with Tuberculosis	9.6%	24.1%	-	0.02%	5.0%	-
CYSTICERCOSIS:	,		***************************************	Om		
Carcases of which some part	7 07	7				
or organ was condemned Carcases submitted to treat-	13	1	-		_	<b>-</b>
ment by refrigeration Generalised and totally	13	1	-		-	-
condemned	-	-	_	••	-	-

The fourteen carcases affected with Cysticercosis represents an incidence of 1.75%, a decrease of 0.52% over the previous year's figure.

The weights in pounds of carcases and organs found to be unfit for human consumption are given in the table below.

	Whole Carcases	Part Carcases	Organs	Total
All diseases except Tuberculosis	679	720	6,435 <sup>1</sup>	· 7,834½
Tuberculosis only	2,867	1,765	3,169	7,801
Totals	3,546	2,485	9,604 <sup>1</sup> 2	15,635½

The meat inspectors continued to act as Certifying Officers at one slaughterhouse where pigs were presented for certification under the Fatstock Guarantee Scheme operated by the Ministry of Food.

## FOOD PREMISES.

Excluding the visits made to slaughterhouses, the number of visits made to premises where food is manufactured, prepared or sold for human consumption was 708.

## No. of food premises, by type of business.

Type of business	Number
General grocers and provision dealers Greengrocers and fruiterers (incl. wet fish, game etc.) Fishmongers (incl. poultry, game, etc.)	89 52 4
Meat Shops (butchers, cooked & preserved meats, tripe, etc.)	71
Bakers and/or confectioners	82
Fried Fish Shops	31
Shops selling mainly sugar confectionery, minerals, ice-cream, etc. Licensed premises, clubs, canteens, restaurants,	25
cafes, snack bars, etc.	84

## No. of food premises, by type, registered under Section 14 of the Food and Drugs Act, 1938, or under local Acts -

## FOOD AND DRUGS ACTS, 1938-1950.

Since this authority is not a Food and Drugs Authority, sampling under the above Acts is carried out by the Lancashire County Council. I am indebted to Dr. S. C. Gawne, County Medical Officer of Health, for the following details of samples procured in this area during the year.

A total of 172 samples was obtained, of these 120 were of milk and the 52 others comprised:-

		•		
2	Meat, canned	2	Ice cream	
2	Curry powder	2	Cakes	
2	Treacle	2	Beef sausages	
. 5	Oatmeal	1	Tomato ketchup	
2	Plain flour	1	Salad cream	
1	Fresh cream	2	Lard	
1	Sponge cake and sponge	2	Pepper, white	
	pudding mixture.	2	Butter	
1	Puff pastry mixture	1	Dripping	
1	Double cream	1	Split peas	
1	Honey	1	Soup mixture	
1	Cooling powder	1	Blanc mange powder	
2	Golden eye ointment	3	marmalade	
3	Cod Liver Oil	1	Lime jelly marmalade	ł
2	Mineral water	2	Self raising flour	
1.	Soothing powders	2	Olive oil	
2	Ice lollies			

All the above samples were reported by the County Analyst to be genuine with the exception of the following:-

Result of Analysis

Sample.

l plain flour	Creta praeparata only 5.5 ounces per 280 pound sack. Should be 14 ounces per sack. Vitamin Bl only 0.16 milligrams per 100 grams. Should be 0.24 milligrams. Iron only 1.12 milligrams per 100 grams. Should be 1.65 milligrams.	Ministry of Food notified
l formal milk	The freezing point indicated the presence of 0.8% of extraneous water.	Vendor caut- ioned and furthersample obtained.
l Ice cream	Milk solids other than fat 7.1%	Vendor notified and further sample obtained.

Action Taken

#### ICE-CREAM.

There are 151 premises registered for the retail sale of icecream, and five premises manufacturing ice-cream within the Borough.
A total of 93 visits were paid to these premises during the year, and
59 samples of ice-cream were submitted to the appropriate test. Samples
were taken of the products of 21 manufacturers, with results as given
below:

Provisional		_	_	62
Provisional	Grade	R	<u> </u>	~
Provisional	Grade	3		6
Provisional	Grade	4		5

The first two grades can be regarded as giving a satisfactory result. Of the twenty samples of local manufacture, 15 were placed within this category.

## HEALTH EDUCATION.

No specialised series of lectures was undertaken during the year, since the requirements of the long-awaited Food Hygiene Regulations were not known. Opportunity was taken, wherever unhygienic practices were observed during routine inspections of food premises, to impress upon food handlers the necessity for observing absolute cleanliness.

1 /

PREVALENCE OF, AND CONTROL OVER

INFECTIOUS DISEASES.

## INFECTIOUS AND OTHER NOTIFIABLE DISEASES (EXCEPT TUBERCULOSIS)

An epidemic of Measles gave rise to 372 notifications. Fortunately the cases were of a mild type. There were seven cases of Acute Poliomyelitis, six of them paralytic and three cases of Encephalitis, two of which died. Six cases of Sonne Dysentery were notified and six cases of food poisoning. Fifty cases of Whooping Cough and twenty cases of Scarlet Fever and with nineteen cases of Acute Pneumonia completed the picture for the year.

## HOSPITAL ACCOMMODATION FOR INFECTIOUS DISEASES.

This is provided by the Burnley and District Hospital Management Committee at Marsden Hospital, Burnley, for all infectious diseases with the exception of smallpox. There are, however, occasions when accommodation thereat is not available and arrangements are then made through the Bed Bureau for admission of the patient to an isolation hospital under the control of a neighbouring Hospital Management Committee.

During the year 17 patients were admitted to Infectious Diseases Hospitals, a reduction of 12 on the previous year.

The following tables show:-

- 1. Analysis of cases notified during the year, according to diseases and ages of patients.
- 2. Comparison of Notifications and Hospital Admissions for 1955 and two previous years.
- 3. Comparison of Notifications for 1955 with previous five years and average.
- 4. Monthly incidence of notifications during 1955.
- 5. Ward analysis of notifications during 1955.
- 6. Comparison of case rates for certain infectious diseases for England and Wales and Nelson for 1955.

#### TUBERCULOSIS.

There were 26 new notifications received during the year, 24 respiratory (14 males and 10 females) and 2 non-respiratory (1 male and 1 female). This was a reduction of 3 cases (1 respiratory and 2 non-respiratory) on the previous year, and gave a case rate of 0.78 per 1000 population (respiratory 0.72 per 1000 and non-respiratory 0.06 per 1000) a reduction of 0.08 per 1000 population. The corresponding rate for England and Wales was 0.87 per 1000 population (respiratory 0.77 and non-respiratory 0.10 per 1000) a reduction of 0.13 per 1000 population on the previous year.

Analysis by occupation and sex of the new cases notified is as follows:-

Respiratory Cases.		Non-respiratory Cases.							
0.5.5		x					Sex		
Occupation.	M.	F.	Occu	pation	1	I.	F.

Student Nurse	1	-							
Warp Pinner	gate .	1							
Weaver	3	1							
Warehouseman	1	_							
Retired	1	Spile .							

Three deaths from tuberculosis were registered, 2 males and 1 female, all respiratory, and these gave a death rate from respiratory tuberculosis of 0.09 per 1000 population. This was an increase of 0.03 per 1000 on the previous year which was the lowest such rate recorded for the Borough.

The Tuberculosis Death Ratesfor England and Wales as a whole are, Respiratory Tuberculosis 0.13 per 1000 and Non-respiratory Tuberculosis 0.02 per 1000 population.

The notification of tuberculosis was generally efficient and there was no evidence of excessive incidence of, or mortality from tuberculosis in any particular occupation in the district.

The following tables show: -

- 1. An analysis of the new notifications of Tuberculosis and deaths from the disease during 1955, according to age groups and sex.
- 2. The number of new notifications of Tuberculosis and deaths from the disease, with rates per 1000 population over a period of 17 years, 1939-1955.
- 3. The number of cases on the Tuberculosis Register during the year.

Analysis of new cases of Tuberculosis and deaths from the disease According to age groups and sex.

## PUBLIC HEALTH ACT (PREVENTION OF TUBERCULOSIS) REGULATIONS, 1925.

No action was necessary under these Regulations for dealing with tuberculous employees in the milk trade.

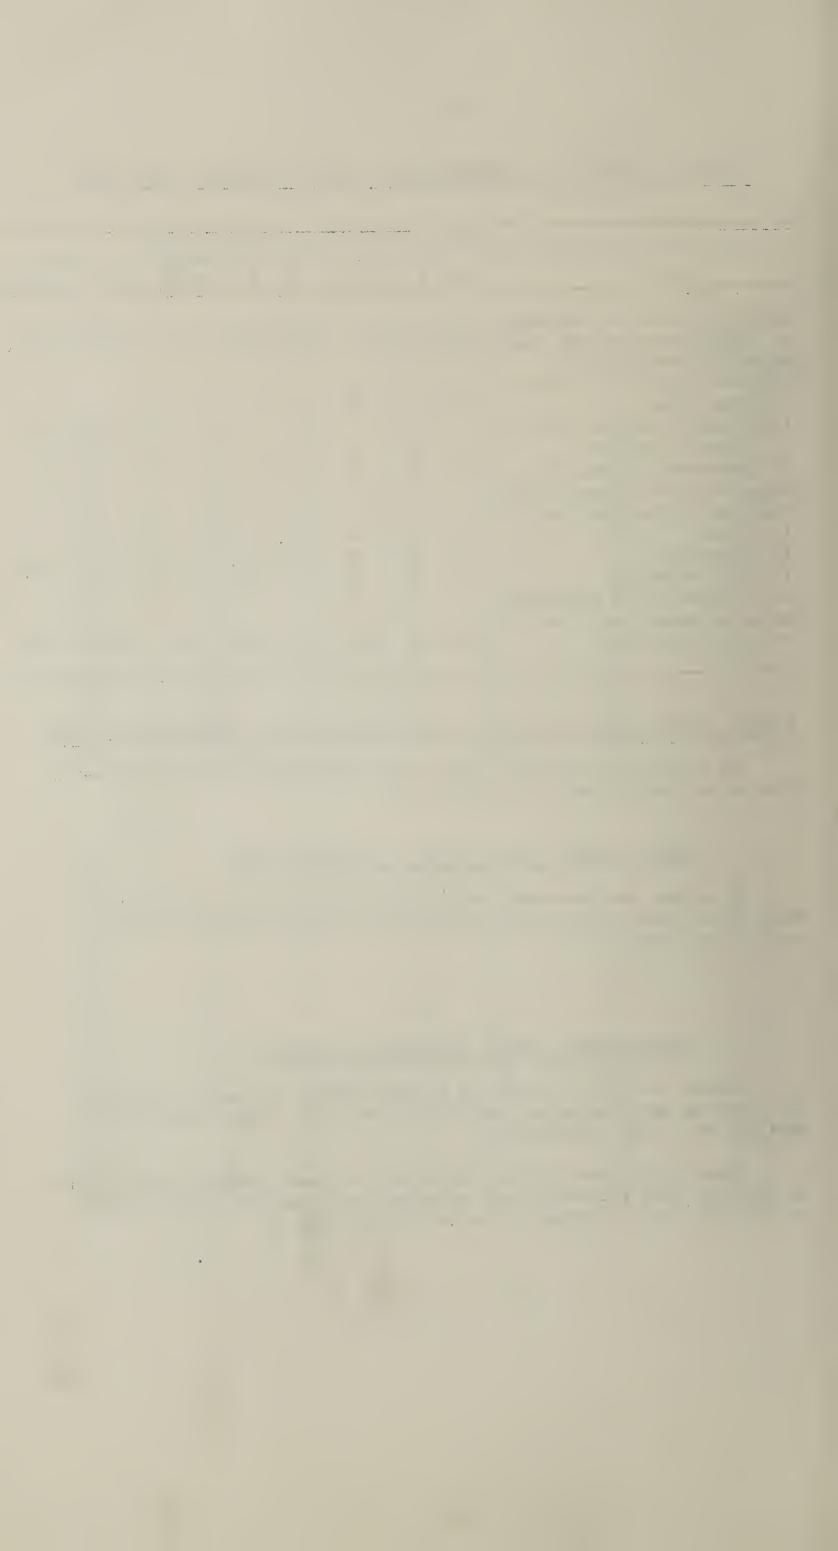

### PUBLIC HEALTH ACT, 1936 - SECTION 172.

No action was necessary under this section for the removal to hospital of infectious persons suffering from tuberculosis of the respiratory tract.

## DISINFECTION AFTER INFECTIOUS DISEASES.

During the year 72 rooms in 61 dwellinghouses and 17 classrooms in 4 schools were fumigated, and 747 articles of bedding and wearing apparel, etc. were disinfected.

Formalin is used for the fumigation of rooms and the disinfection of bedding, etc. is carried out by steam, the apparatus being situate at the Cleansing Department, Charles Street, Nelson.
